

Read-only LFS

Name: H M Abdul Fattah

Run instruction:

1. Open command prompt then type:

- make
- ./lfs image_file_name directory_to_run

In place of 'image_file_name', use proper image file, e.g.: LFS_DISK-100_files.img

In place of 'directory_to_run', use proper directory, e.g.: ~/test/

2. Open another command prompt and go to 'directory_to_run' and test simple read-only operations.

3. When I tested my implementation locally, I stored my generated output files. They are on 'my_generated_output_files' folder in my submission. Use 'diff' command to check for correctness.

- diff file1 file2

In place of file1, use any of my output_files from 'my_generated_output_files' folder.

In place of file2, use corresponding gold standard output file.
